TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, C, C#, Bash, SQL, PHP, HTML

Tools / Frameworks: Git, Docker, AWS, React.js, Vue.js, Node.js, Flask, Laravel, MongoDB, MySQL, Unity

EDUCATION

University of Waterloo

Waterloo, ON

Bachelor of Computer Science Co-op Program

September 2021 - May 2026

- **Specializations and Minors:** Artificial Intelligence (AI) Specialization, Combinatorics and Optimization Minor
- **Relevant courses:** Artificial Intelligence, Data Structures & Algorithms, Software Design & Architecture, Object-Oriented Programming, Operating Systems, Sequential Programming, Functional Programming, Numerical Computation, Compilers, Computer Networks, Combinatorial Optimization

EXPERIENCE

Fullstack Developer Intern | Knak, Ottawa

January 2024 – April 2024

- Streamlined marketing processes by **95%** for enterprise companies through developing Knak's editor platform, allowing clients to create customized email and landing pages in minutes and without any coding knowledge
- Participated in biweekly sprint planning sessions to implement new features (through **Vue.js**, **TypeScript**, **PHP**) requested by customers, improving turnaround time from feature request to code deployment by **30%**

Backend Developer Intern | Knak, Ottawa

September 2023 – December 2023

- Utilized **AWS Lambda** with **Docker** containers to parse user assets in the Knak editor into dynamic HTML code for marketers, decreasing download time by **10%** through using a recursive tree data structure for parsing
- Reorganized company preference flags in the codebase, cleaning up the backlog by **50%** within a few weeks
- Developed migrations to the **MySQL** database to efficiently update client and content data upon new features

Game Developer Intern | ZeMind Game Studios, Toronto

May 2023 – August 2023

- Built a virtual reality (VR) application from scratch in **Unity/C#** for Durham Region Victim Services (DRVS), providing three immersive experiences to help youth navigate exploitative situations
- Designed project's backend architecture through encapsulation and abstract interfaces; exported weekly sample builds to DRVS using the **Oculus SDK** to handle player events and user input tracking in virtual space

Software Developer Intern | Royal Bank of Canada, Toronto

May 2022 – August 2022

- Designed and developed a **Flask** application to test **60%** of RBC's site actions with **Python**, **Pytest** and **Selenium**; adopted by team of 10 developers, improving testing time efficiency by **80%** before deployment
- Redesigned a company wide **Vue.js** web application used by internal engineers to request features and bug fixes; implemented responsive user interfaces through users' feedback of desired functionalities

PROJECTS

🔗 Landing Page Generator | JavaScript, React.js, Node.js, MongoDB, Cohere LLM API, OpenAI API

- Link platform that provides a codeless editor to create personalized domains for users in under **2 minutes**

🔗 Emulator for Game Boy | C, SDL

- Game Boy CPU core emulator, effectively handling user input and sprite rendering using **C** and the **SDL** library

🔗 Multiplayer Tetris | C++, XMinig Server

- Tetris game using **OOP** principles to implement the **MVC** architecture through graphical/text display observers
